Quiz Instructions

Question 1 15 pts

What is the voltage provided by this battery holder.

☐

1.5V

☐

3V

☐

6V

☐

12V

Question 2 17 pts

A 6V battery (lantern battery) gives each 1 coulomb an energy of

☐

1J

☐

12J

☐

3J

6J

Question 3 17 pts

kitchens have typically 20A outlets. The voltage is 120V. What is the maximum power available from the outlet?

hint: power is J/s (energy per unit second) . See slide

6W

120W

20W

2400W

Question 4 15 pts

If three identical bulbs are connected in series across a 12V battery, the voltage across each bulb will be

hint: Voltage works like "height"/ The voltage drops across each load is the same

12V

48V

I missed the class

4V

Question 5 10 pts

60 C of charge flowing in 1 minute is

(hint: convert minute to seconds. Use equations - slide 21)

30A

60A

1A

☐

0A

⋮

Question 6 15 pts

In class, I plugged a voltmeter in a wall outlet. I got a voltage of

DO NOT ATTEMPT TO DO THE SAME !!! current from the outlet can kill you

☐

about 1,000V

☐

about 120V

☐

I don't pay attention in class. I fell asleep

☐

about 9V

⋮

Question 7 5 pts

A power supply supplied 10C in 5 s . This is a current of

☐

5A

☐

2A

☐

10A

☐

50A

⋮

Question 8 10 pts

In class I discussed how a lemon battery works. We discussed some electrochemistry.

In the case we discussed, there was one zinc electrode and one copper electrode.

What is true? (see the image I showed in class. see video)

- ☐ the Zinc electrode is oxidized and electrons are collected by H^+ in the juice at the Cu electrode
- ☐ the Copper electrode is oxidized and the electrons are collected by H^+ at the zinc electrode
- ☐ OH^- in the juice provides the electrons that will flow in the circuit
- ☐ I don't pay attention in class. I don't care.
